| Design for elves clothes. Each pa sticking them down and labelling. | | | |

Year 1

| | | |
|---|--|--|
| Tuesday 30 th March LO: To design a space buggy | | |
| * What kind of vehicle are you going to make? Draw and label a design of your vehicle here: What materials and tools will you need to make your vehicle? | ** Draw and label a design of your vehicle here: What materials will you need? What tools will you need? How will you decorate your vehicle? | *** Can you describe each step you will need to take to make your vehicle? Use the words below to help you. |
| wheel axle chassis body join decorate combine cut glue materials | | |

| | | |
|---|--|--|
| Thursday 1 st April LO: To evaluate your design | | |
| * Pick the statements which are true: I am pleased with how my vehicle turned out. I worked very carefully when making my vehicle. My vehicle has wheels on axles that move. My vehicle has a body that has been well put together. My vehicle looks really good. I followed my design well when I made my vehicle. There are lots of things I would change if I made my vehicle again. | ** Score yourself out of 5 for each statement. My vehicle looks really good. The wheels and axles on my vehicle work really well. I followed my design well when I was making my vehicle. I worked safely and carefully when I was making my vehicle. Now answer these questions: What do you like best about your vehicle? What could you change to make your vehicle even better? | *** What do you like best about your vehicle? What do you think you could make even better about your vehicle? How well does your vehicle match your original design? How well have the wheels and axles been put together? How well has the body of the vehicle been put together? How well has the vehicle been decorated? What would you change about your vehicle if you had to make it again? What was the most difficult part about making your vehicle? |

LOOK = 5/5
Wheels = 4/5
design = 5/5
safe + y = 5/5

I liked the ^{inside} wheels
I would change the wheels
Careful evaluations George

L.O evaluate current bridge designs and identify features of an effective bridge

| . | .. | ... |
|--|--|--|
| recognise there are different bridge designs | can identify and name different bridge designs and talk about their features suspension arch beam | can give real life examples of different bridge designs e.g a suspension bridge in Clifton, Bristol ✓ |

This picture is a arch bridge. It is made from stone. It has got little holes at the bottom that is why it is a arch bridge.

This bridge is located to Ashton Keynes. ✓

This bridge is strong.

This is a beam bridge beam bridges cant be very long but sometimes they can they go across water and have beams to hold them up. ✓

Arch bridge

This one has more arches because it is longer.

The arch hold's the weight. ✓

This is a suspension bridge it is located in Bristol and it is a Clifton suspension bridge this bridge was designed by Brunel.

The bridge is made from steel and cables. ✓

Tuesday 20th October 2020

LO: To evaluate my bridge

| * | ** | *** |
|--|---|--|
| With support I can say whether my bridge meets the class design criteria, reflect simply upon the process of making my bridge and suggest a way that I could improve my bridge | I can explain how my bridge meets the class design criteria, reflect upon the process of making of my bridge and suggest ways in which I could improve my bridge. | In addition to 2** I can link the improvements I suggest to the design criteria. |

Evaluating Your Bridge

Does your bridge meet the design criteria? How?

Diagonal struts it can hold a car a bus also no because there's no one can go under but the bus was too heavy it can hold a person.

What went well when you were making the bridge?

When we were making the rods. And slicing

What challenges did you face when making the bridge?

Keeping it up and making it strong. and it didn't work

How did you overcome these challenges?

Persgid and never gave up and tried my best

What would you change next time?

Put more pilers on, and yous more lolly pop sticks also make work a bit better.

You have really good ideas for how to improve your design next time. Well done for persevering.

Date: Thursday 17th December 2020

LO: To evaluate my 3D river model design.

1*

I can write 3 simple sentences to explain what went well.

I can write 3 simple sentences to explain what I would do differently next time.

2**

I can explain what went well during the making stage of the project.

I can explain what I would do differently next time (if I was making the same or a similar model in the future).

I can explain what a peer has suggested I could do to improve my model.

3***

I can explain in detail what went well during the making stage of the project.

I can explain in depth what I would do differently next time (if I was making the same or a similar model in the future).

I can explain what a peer has suggested I could do to improve my model.

What went well?

My river model was successful because we managed to make a sturdy structure using cardboard. The height of the upper course was higher than the middle and lower course so we could lay a cardboard piece on the structure to make a ramp. The water fall went perfectly and so did our mountains.

What I could do differently next time

If I was making a model similar to this in the future, I would have used hot glue to make the mountains and to stick the newspaper painted rocks to the painted green tissue paper. Also, I would not have painted the tissue paper purple

and have added an oxbow lake to my model. As well as that, we should have made our rocks a little bit smaller.

What my peer has suggested

My peer suggested for me to add some bushes in and to do some more mountains. And we shouldn't have painted the water purple.

Well evaluated, Isabelle.

I can explain in depth what I would do differently next time (if I was making the same or a similar model in the future). ✓

I can explain what a peer has suggested I could do to improve my model. ✓

What went well?

My river model was a success because we were able to make a strong base using the taped cardboard. The upper course of the stream, which are called tributaries were already formed into rivers so it can go down the waterfall more easier.

The upper course was bigger than the middle the middle course was bigger than the lower.

What would I do differently next time?

In my opinion, I think that my group should of instead putting tissue paper (blue) then putting paint. We should of put paint for it and make more to stand out or more than the blue tissue paper. Also that it might be better if we had put a better structure if we had enough time for it because we were running out of time.

Year 6
