

The background of the image is a photograph of a forest fire at night or in low light. The scene is dominated by a bright, orange-yellow glow from the fire, which illuminates the silhouettes of tall, thin trees. The sky is dark, and the overall atmosphere is hazy and smoky. Overlaid on this image are several white, dashed, wavy lines that resemble topographic contour lines, creating a layered, abstract effect. The text 'Forest fires' is centered in the middle of the image in a clean, white, sans-serif font.

# Forest fires

# What we know.

Forest fires could be bad for the environment whether that is about animal habitats or our atmosphere. They could also count as deforestation meaning the more forest fires, the less trees we will have. In addition, they could release seeds or encourage new tree species to grow!

# Ways forest fires could start.

Lightning could strike a tree and  
Set a fire.

A tree could be ignited by the heat of  
the sun.

Human carelessness (camp fire or not  
burning rubbish properly).

Sparks from the wheel of a train.

# What these fires could result to

They could:

Destroy animal habitats.

Pollute the air.

Cause crown fires.

And maybe even release carbon dioxide into the atmosphere

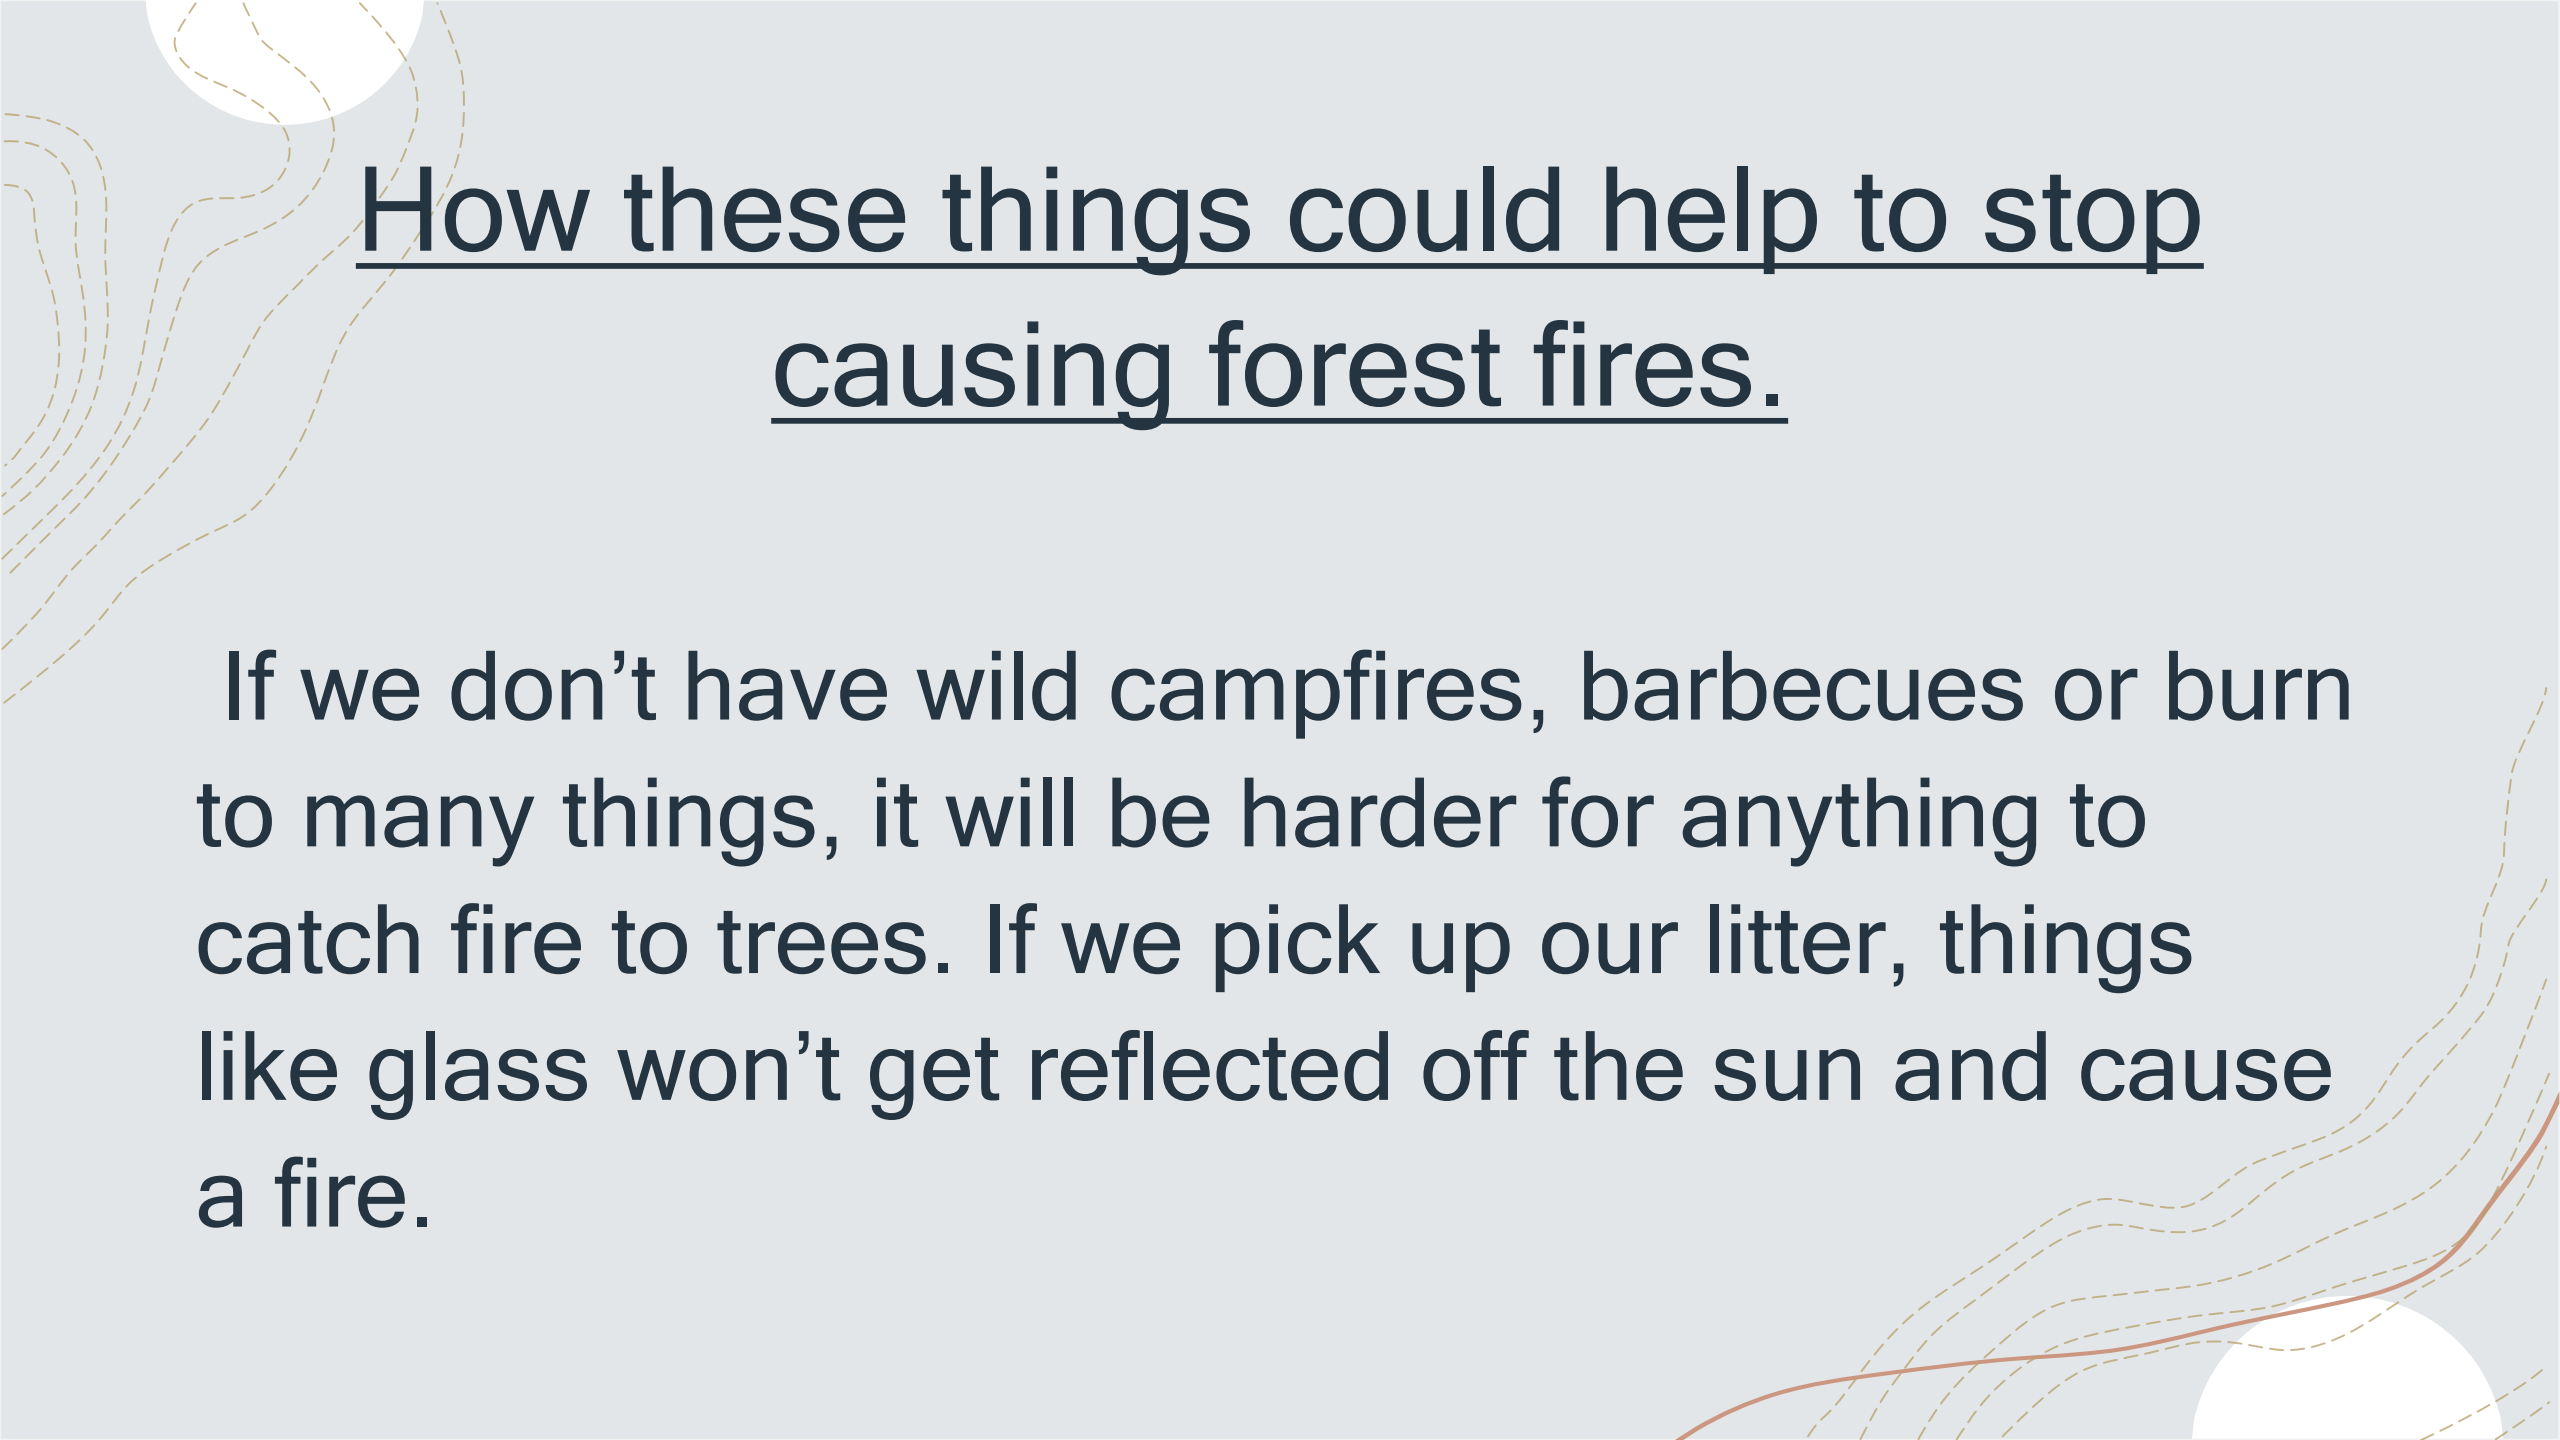

## What are crown fires?

Well, crown fires are just fires spreading from treetops to treetops.

# What can we do to help?

- Pick up our litter.
- Don't have wild campfires or barbecues.
- Don't burn as many things.

# How these things could help to stop causing forest fires.

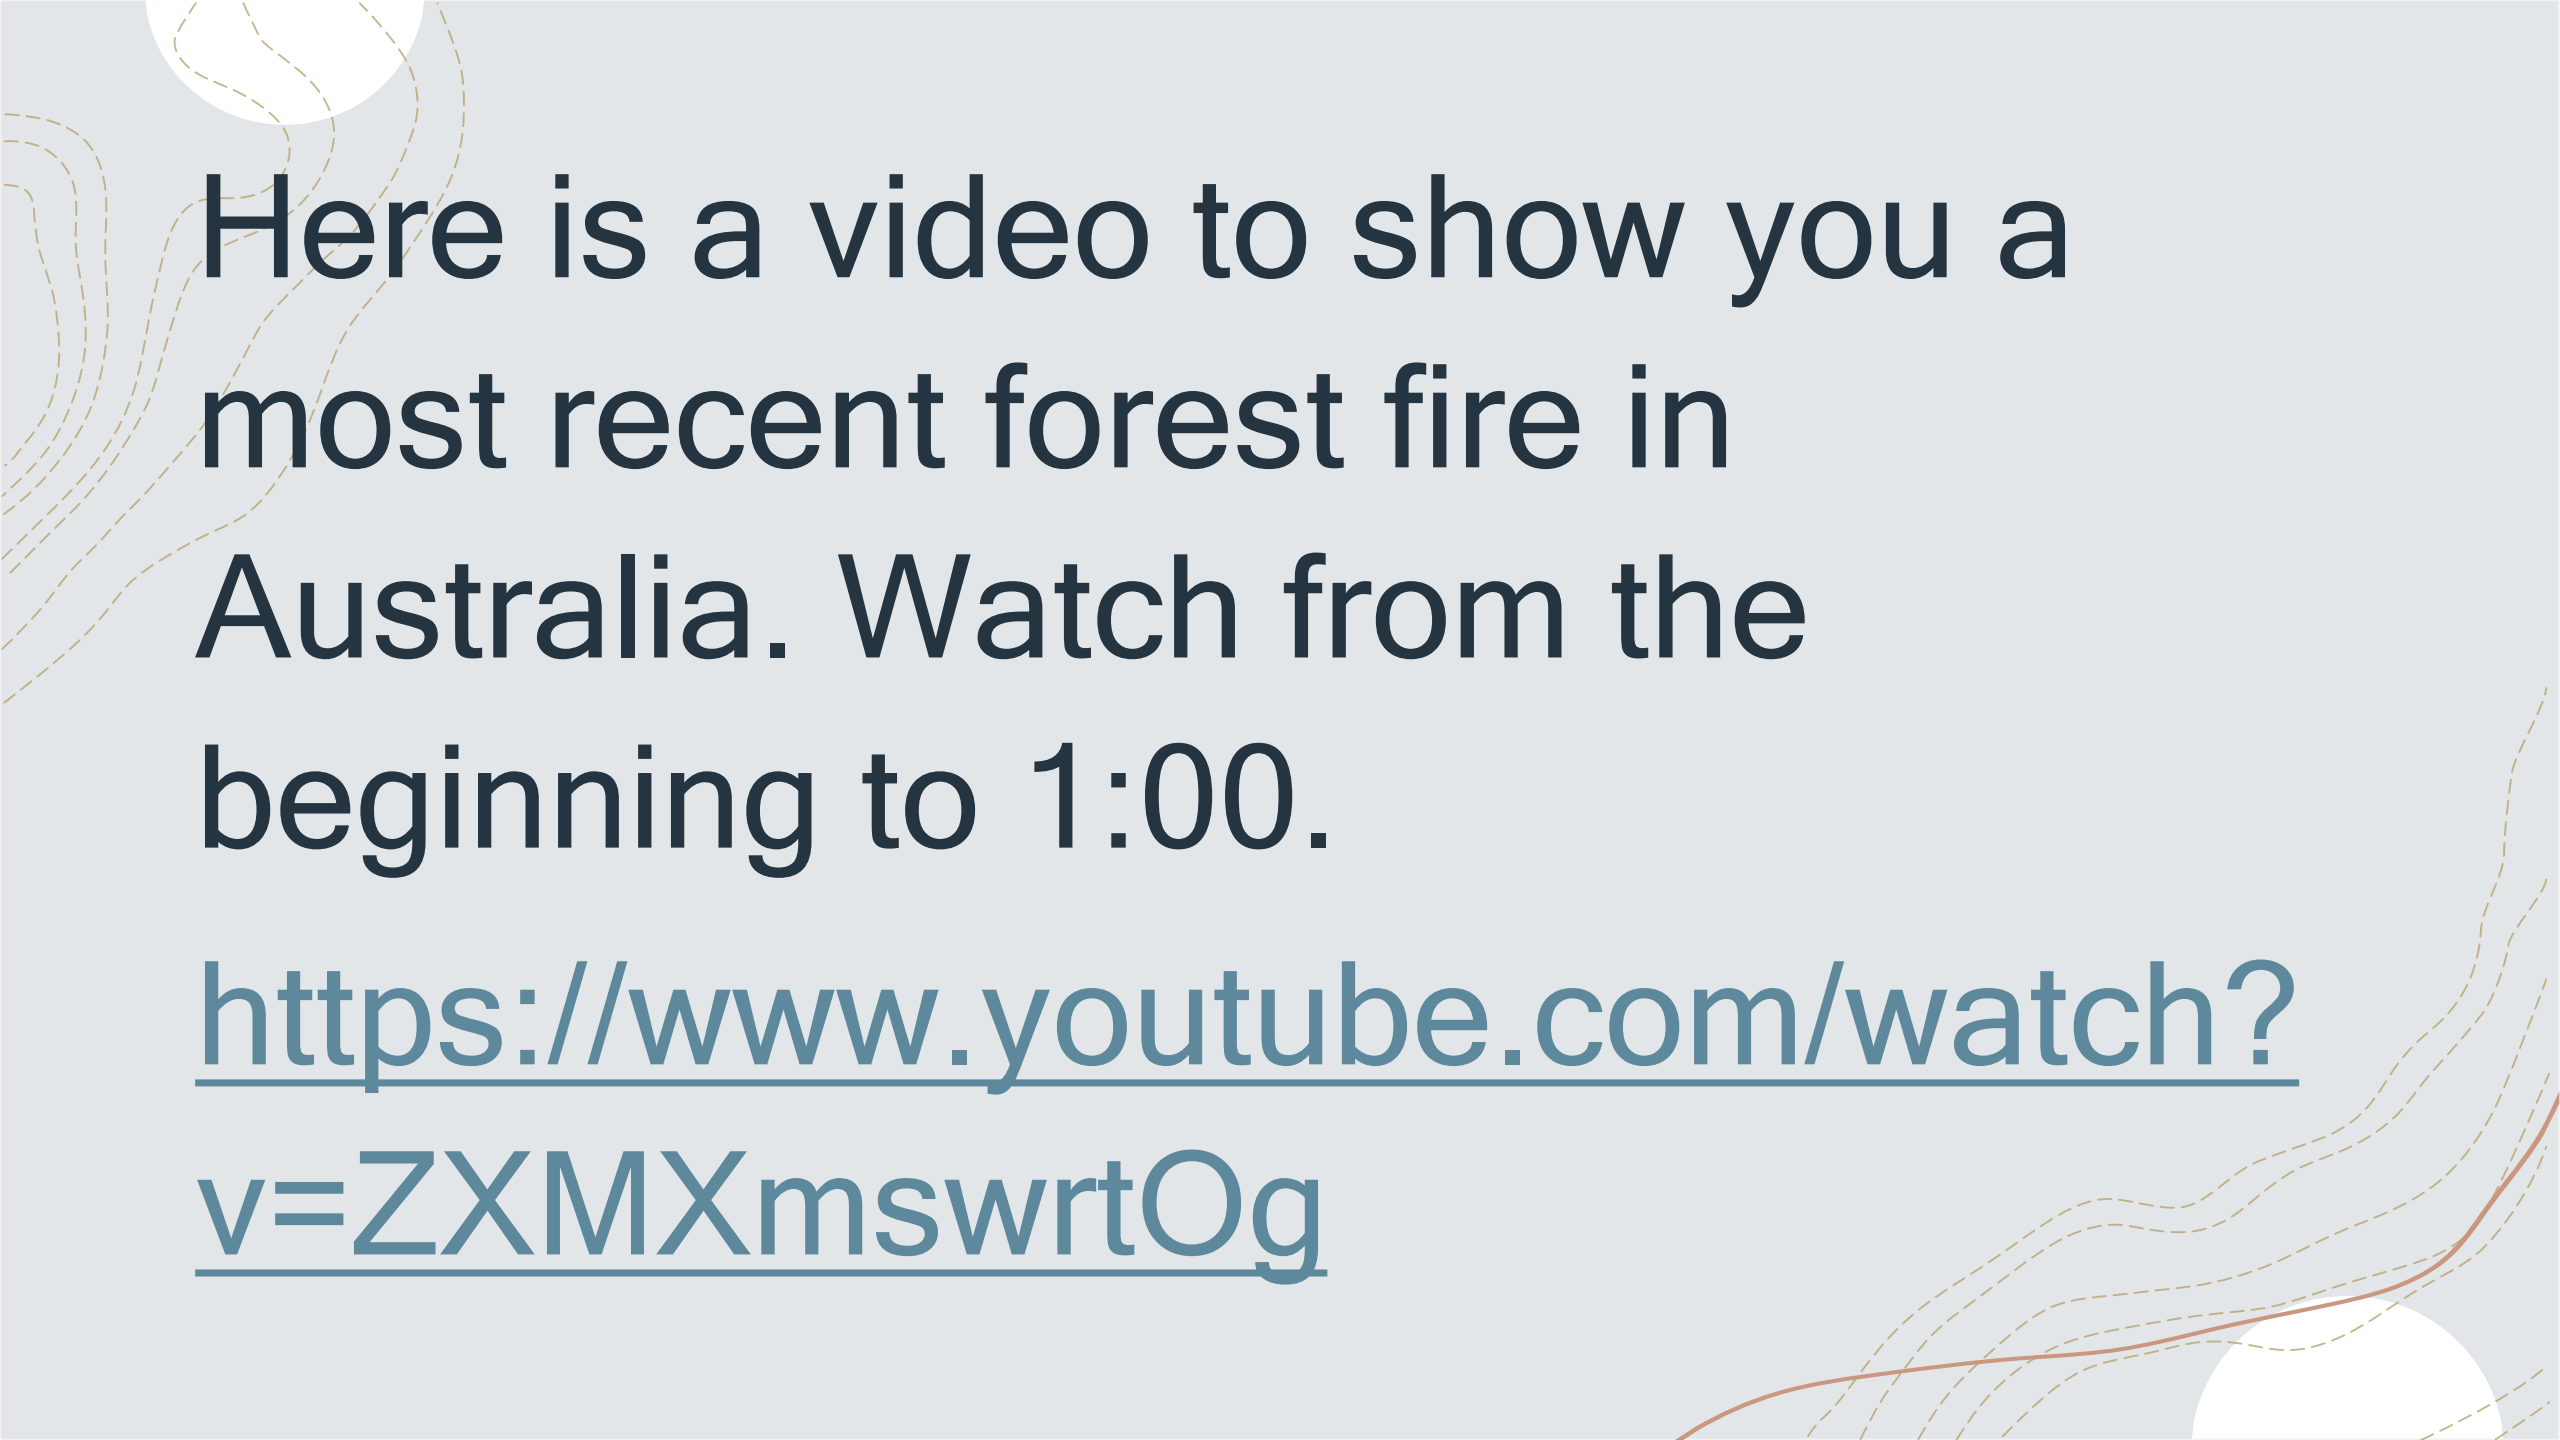

If we don't have wild campfires, barbecues or burn to many things, it will be harder for anything to catch fire to trees. If we pick up our litter, things like glass won't get reflected off the sun and cause a fire.

A photograph of a forest fire. The ground is covered in dry grass and brush, which is being consumed by bright yellow and orange flames. In the background, several dark, charred tree trunks stand against a hazy, smoke-filled sky. The overall scene is one of destruction and danger. The text is overlaid in the center in a white, sans-serif font. There are also some faint, decorative white lines and a small green plus sign in the background.

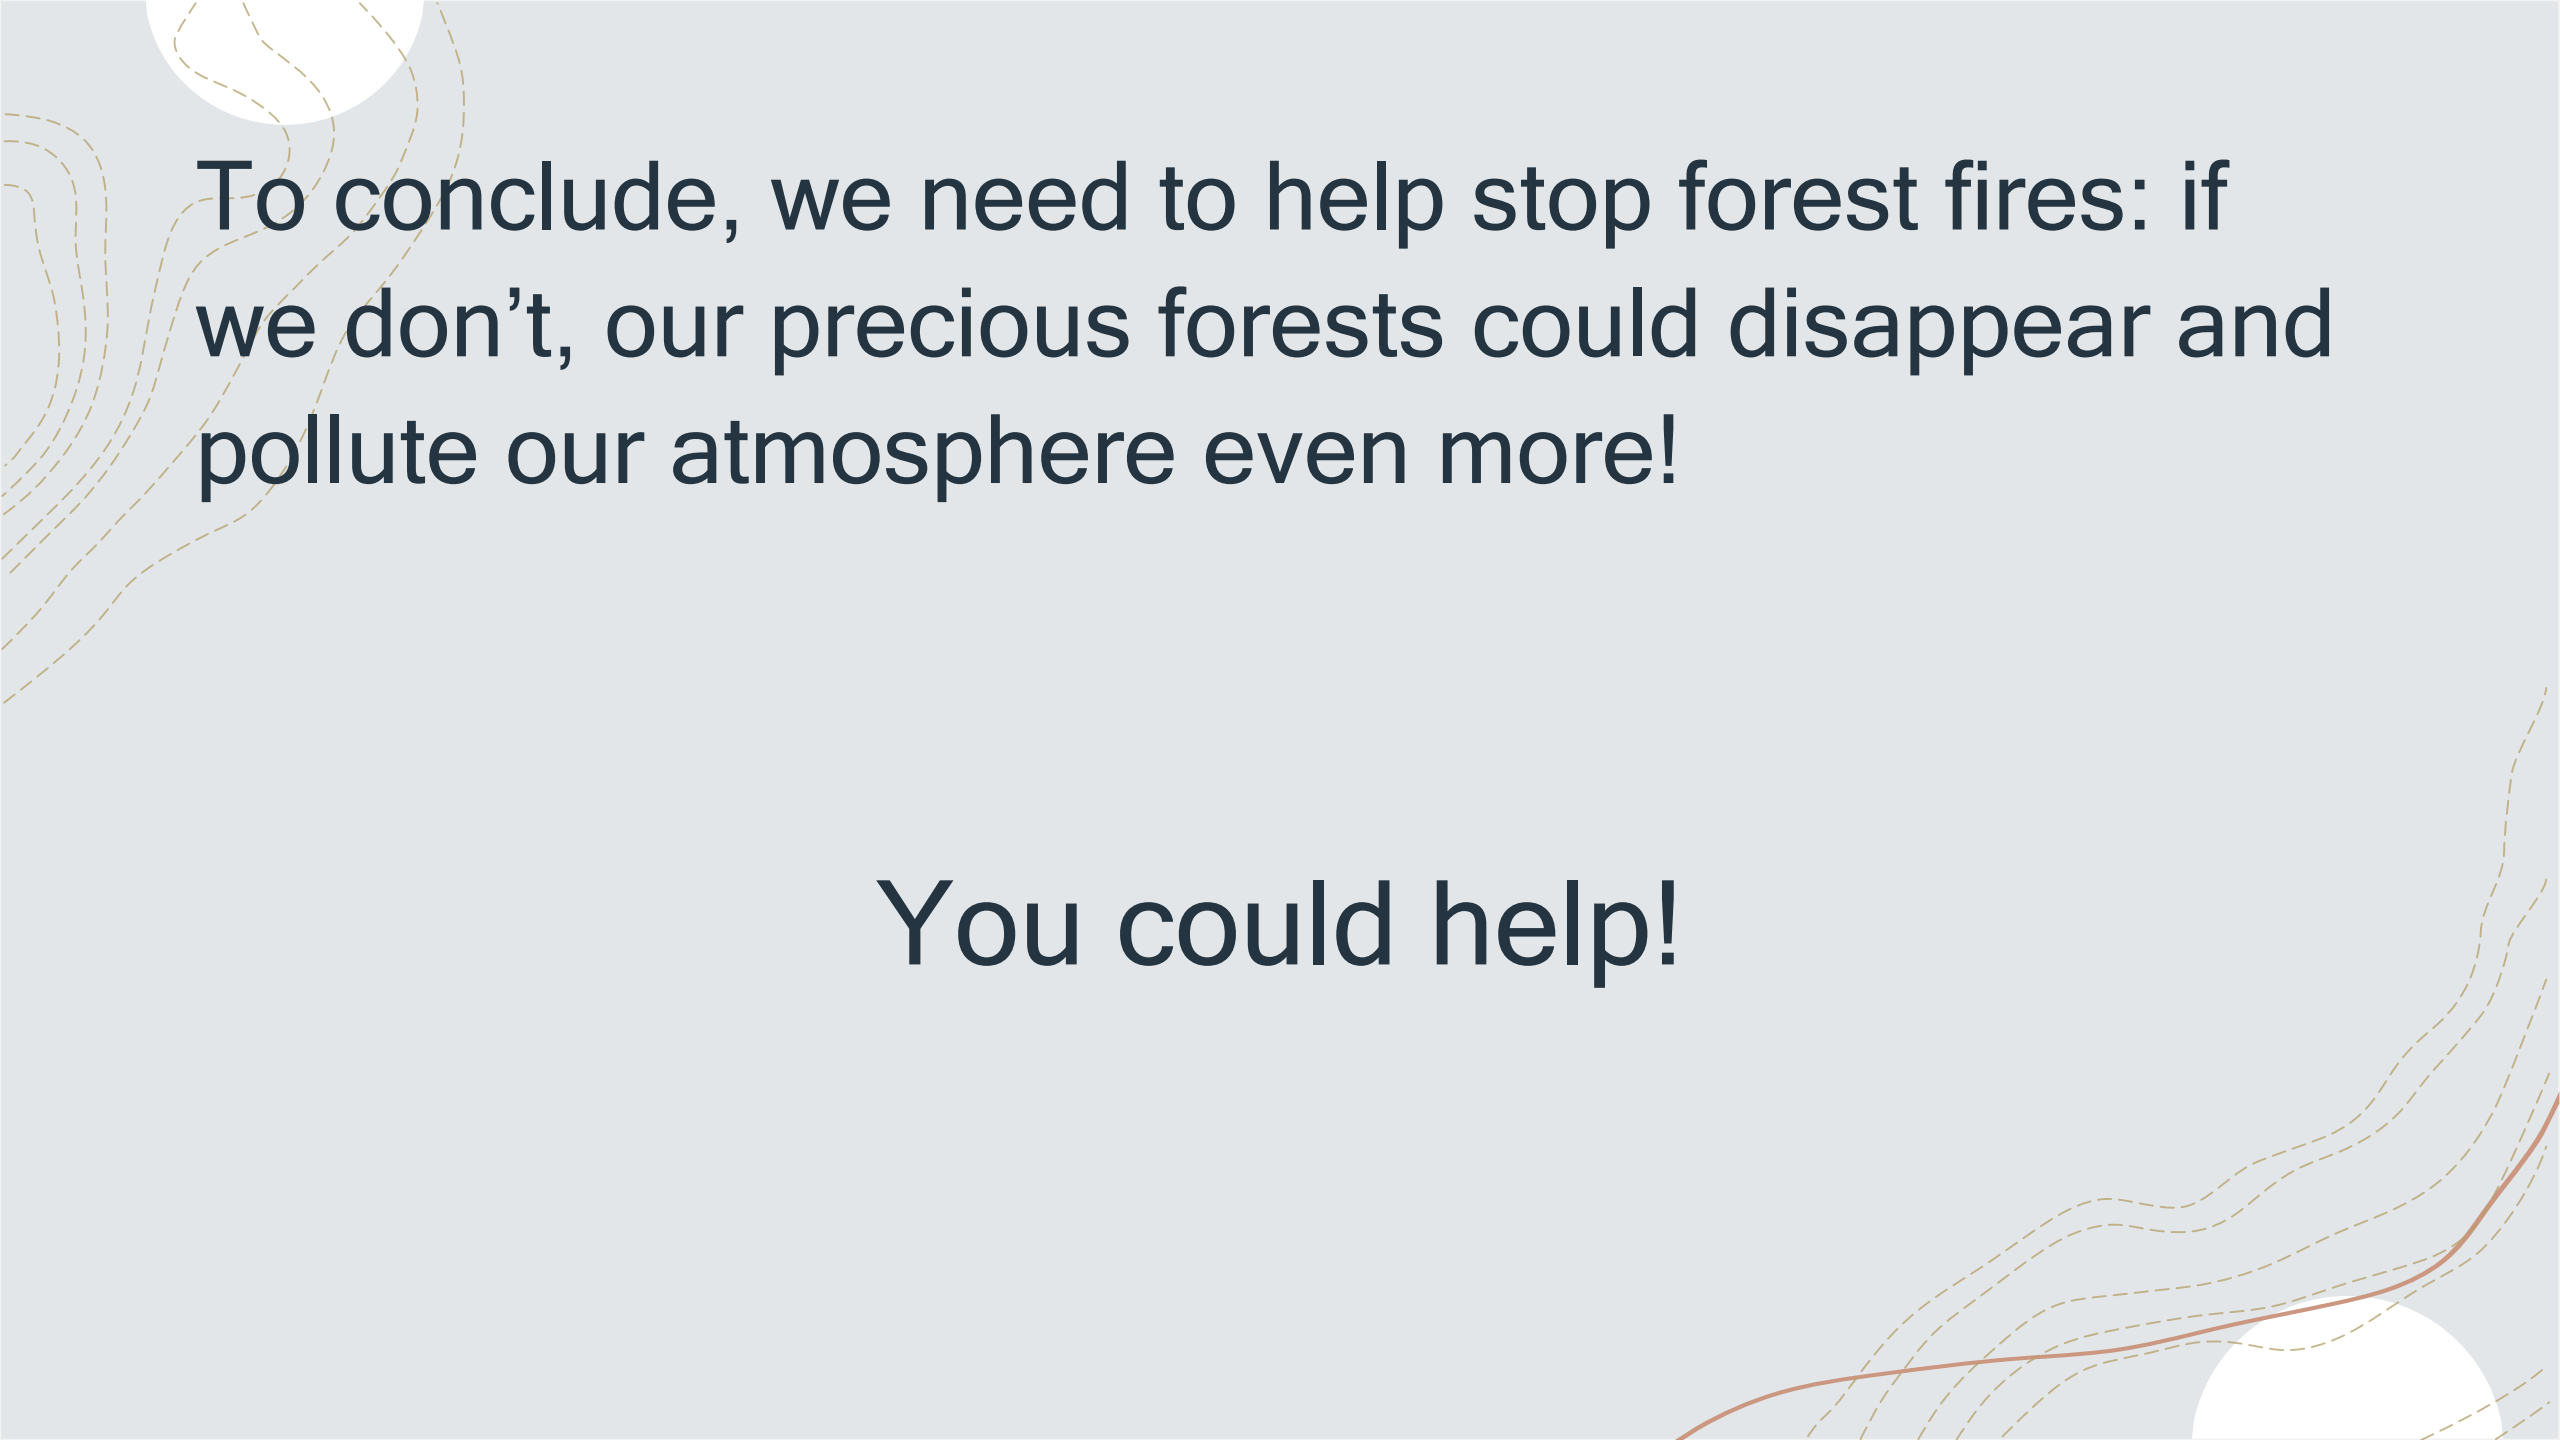

This is what could happen  
if we are not careful

Here is a video to show you a most recent forest fire in Australia. Watch from the beginning to 1:00.

<https://www.youtube.com/watch?v=ZXMXmswrtOg>

To conclude, we need to help stop forest fires: if we don't, our precious forests could disappear and pollute our atmosphere even more!

You could help!
